Question	Answer
1. What is the main purpose of the study?	The study aims to investigate the effectiveness of a new teaching method in improving student performance in mathematics.
2. What are the independent and dependent variables?	The independent variable is the teaching method (traditional vs. new method). The dependent variable is the student performance score.
3. How was the data collected?	Data was collected through a series of tests administered to two groups of students: one using the traditional method and the other using the new method.
4. What are the results of the study?	The results show that students using the new teaching method achieved significantly higher scores than those using the traditional method.
5. What are the implications of the study?	The findings suggest that the new teaching method is more effective than the traditional one, which has implications for curriculum development and teacher training.
